

Simtech T-Sem Trailed

Introducing the new dual/triple hopper T-Sem AC range T-Slot drills

Available for Seed only or Seed & Fertiliser the new T-Sem AC trailed range of T-Slot drills is a European built solution to direct drilling on large scale farms. Using the same proven Disc/Tine/Roller configuration as with all smaller T-Sem models the AC drill adds the ability to apply fertiliser with the seed or to just carry larger loads for longer working times before re-filling. The addition of the third micro hopper adds even more versatility allowing materials such as slug pellets to be sown at the time of drilling. Initially built in either 6 or 8 metre widths, other sizes will be considered upon request.
