

SimTech **AITCHISON** SNG460 Fertiliser Spreader

These robust and durable fertiliser spreaders are designed to be used behind quad bikes. Being quick to couple up and lightweight in the field, these spreaders are ideal to sow fertiliser on rotationally-grazed paddocks and top-dress both arable crops and grassland before one can reasonably venture out with a tractor and conventional spreader.

With their plastic hopper, lid and mudguards, plus the stainless steel spinning disc, shutter and agitator, the **AITCHISON** Agrispred is designed to last for years. They are also frequently used by local councils and their contractors to spread salt on roads and pavements.

Hopper capacity	500 kgs
Spreading width	15m
Height	1.40m
Weight	375kgs
Quad bike req'd	4WD 400cc+

Stainless steel spinning disc and spread-rate aperture.
Plastic hopper, lid and mudguards.
Galvanised frame.
